From the Past to the Future

COMPANY

Our digital footprint: past, present and future

COMPANY

Intersistemi group

The Group has been operating in the Information and Communication Technology (ICT) sector for over 40 years, offering its customers certified and cutting-edge products and services in various fields (applications, systems, management, cyber security, market research, territorial information systems, networks and infrastructure and business intelligence) thanks to the daily commitment of a team of over 450 specialised professionals able to identify the most suitable technological and information technology solutions for any need.

Group companies

COMPANY

Our vision

We believe in an innovative future, one that cannot ignore a deep knowledge of history and the past. Our digital footprint is constantly evolving. Thanks to the experience gained over the years, in-depth knowledge of the ICT sector and a focus on quality, which have always been fundamental elements of the corporate mission, the Intersistemi Group is now more than ever the ideal partner of public administrations and companies called to face the challenge of Digital Transformation, in a 360° perspective (Cloud, Internet of Things, Software as a Service, Big Data, CRM 4.0 and Hyperconvergence).

Intersistemi Italia SpA

Parent company. Active since the '80s in the ICT sector, Intersistemi Italia SpA has always been distinguished by its constant focus on the quality of the products and services offered and its marked aptitude for innovation and experimentation with new technological solutions, which have guaranteed and will continue to guarantee it a leadership role in the sector.

Geosystems Srl

The company has considerable experience and specific expertise in the design, implementation and development of both GIS (Geographic Information Systems) and MultimediaIT systems (particularly for the world of transport and mobility).

Xmarc Ltd

It has designed and developed a proprietary platform that enables it to provide its national and international customers with a suite of products and features for the development of Territorial IT Systems with a 3D automated design, modelling and visualisation core.

CSA Srl

Specialised in offering integrated products and services in the field of market research and opinion polls. With ten years' experience in all survey methodologies, it is a full-cycle institution for companies and public administrations, able to provide a highly qualified, professional and innovative service.

INFORMATION TECHNOLOGY

Systems Design, Operation and Maintenance

The competence in design and management of technological infrastructures and the important vertical specialization in the systems areas relating to: traditional virtualizations and microservices, storage and cluster systems, business continuity and / or disaster recovery, represent the result of the big experience gained over the years by the Intersistemi Group able to fully cover all the services relating to the physical and system infrastructures of the systems.

INFORMATION TECHNOLOGY

Application Development and Maintenance

Intersistemi has many references in systems development, from legacy to newer systems based on microservices and real-time technologies. Strong process orientation and adoption of best-of-breed methodologies ensure the success of the initiatives undertaken.

- Development of ad hoc solutions (ERP / CRM, document solutions, legacy, portals and websites)
- Maintenance of application software/market software applications

INFORMATION TECHNOLOGY

Application Portfolio Management

The complex application portfolio management techniques used by Intersistemi are also based on best-of-breed best practices, which guarantee effective acceptance firstly and structured and flexible management subsequently.

- Application Management and Databases
- Management of Content on Websites, Portals and Web Channels
- Data Entry Services

SPECIALIST PROFESSIONAL SERVICES

Specialist professional services

- Digital Innovation
- Project & Portfolio Management
- Demand Management
- Business Process Reengineering

SERVICES

CYBER AND PHYSICAL SECURITY

Cyber Defence Service

Our services are designed to support customers in ascertaining the true level of security of their organisations and in resolving the various issues identified.

- Penetration Test
- Reverse Engineering
- Security Engineering
- Hardening
- Vulnerability Research

CYBER AND PHYSICAL SECURITY

Cyber Defence Platform Integration

Our services are designed to support customers in the scouting, selection and implementation of innovative cyber security solutions and platforms: our technologies can protect organisation and assets of customers.

- IDS/IPS Platform
- Web Application Firewall Platform
- IAM Platform
- Vulnerability Management Platform
- Security Monitoring Platform
- Threat Intelligence Platform
- Anti-APT Platform
- SecOps Platform

CYBER AND PHYSICAL SECURITY

Physical security

Our services meet all customer needs by offering design, build, set-up, run and after-sales support.

- Video surveillance
- Access control
- Access verification
- Intrusion detection systems
- Customer-specific or integration application developments
- Physical security

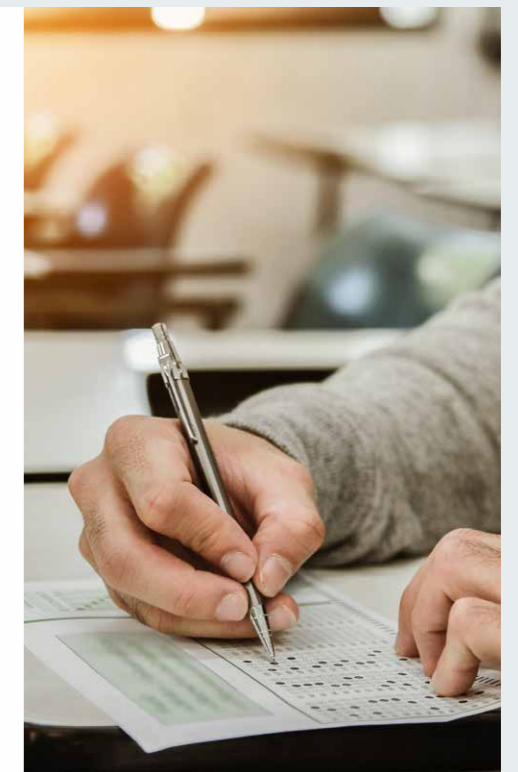

MANAGEMENT OF COMPETITIONS

Management of competitions

The Intersistemi Group has considerable and established experience in offering a variety of services to support competition activities carried out by central/local public administrations and private companies, enabling it to design, coordinate and perform all the operations necessary to set up a service for the selection of candidates entirely in-house.

- Design and printing of optical forms
- On-site optical reading services
- Optical reading outsourcing services
- All-inclusive services
- Systems HW maintenance
- Management of competitions

SERVICES

INNOVATIVE SERVICES

Professional Cloud Migration Services

The presence of highly structured, complex technological scenarios subject to migration has enabled organisational, process and technological best practices to accrue. In particular, the presence of numerous high-profile technical/methodological roles such as Cloud Architect, Transition Manager, Enterprise Architect Lead and Digital Strategy Manager enables customers to be guided along a gradual cloud migration path that significantly reduces the technological and organisational risk of this type of initiative.

- Re-purchase
- Re-architect
- Re-host
- Professional Cloud Migration Services
- Re-platform

INNOVATIVE SERVICES

Internet of Things

The recent partnership with companies specialising in the Industrial IoT sector, has made it possible to capitalise on a number of experiences gained in sectors such as energy management, real-time tracking, predictive maintenance, smart city and smart industry, particularly through the use of the open source Industrial IoT platform.

This modular, customisable platform allows data to be accessed, analysed and shaped to create value quickly and easily, permitting the investment needed for the acquisition of IoT products and ROI to be significantly reduced, while ensuring similar performance and reliability to vendor lock-in products.
